# Finding percentages using 10%, 5%, 1%, ...

Another method is to find 10% of 1% and then scaling the desired percentage up:

**35% of £64**

10% means , so divide the total amount by 10 to find 10% to start with.

We need to get closer to 35%. To get to 30% we want 3 times more.

**10%:**  
**30%:**  
**5%:**  
**35%:**  
**£22.40**

If we know 10%, then 5% would be half as much.

**£6.40**  
**£19.20**  
**£3.20**  
**£19.20 + £3.20 =**

$\times 3$   
 $\div 2$

To make up 35% we want 30% + 5%.

**65% of £26**

**10%:**  
**60%:**  
**5%:**  
**65%:**  
**£16.90**

**£2.60**  
**£15.60**  
**£1.30**  
**£15.60 + £1.30 =**

# Test Your Understanding

[Edexcel GCSE June 2004 1F Q12c, June 2004 3I Q5a]

There are 800 students at Prestfield School.

45% of these 800 students are girls.

Work out 45% of 800

[Edexcel GCSE Jun2016-1F Q16b]

The table gives some information about Charlie's spending last month.

Item	Percentage of total spending
rent	
food	15%
transport	12%
other	43%

If you  
finish...

Charlie's total spending last month was £800.

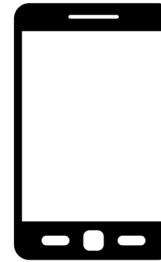

How much did Charlie spend on food last month?

# Percentage Changes

Sometimes you have to find the value after a percentage increase or decrease.

I buy a phone on eBay for £40 and sell it on at a 30% profit. What do I sell it

Jim's boss offers him a 10% increase.

Find how much Jim will be paid with the increase offered by his boss.

£

?

per week

[Edexcel IGCSE May2016-4H Q3a]

In a sale, all normal prices are reduced by 20%

The normal price of a television set is 485 euros.

Work out the sale price of the television set.

?

euros

# Exercise 1

NO  
CALCULATORS

(on provided  
sheet)

- 1 Using converting the percentages first into fractions, determine the following:

a	?	b	?
c	10% of 12 = 1.2	d	25% of 16 = 4
e	30% of 20 = 6	f	40% of 25 = 10
g	75% of 48 = 36	h	60% of 140 = 84
i	90% of 50 = 45	j	12.5% of 32 = 4

- 2 By working with multiples of 10%/5% otherwise, determine the following:

a	10%/5% of ?	b	otherwise, determine the following
c	15% of 40 = ?	d	35% of 60 = ?
e	65% of 120 = 78	f	45% of 30 = ?

3 **13.5**

$$17.5\% \text{ of } 80 = \mathbf{14} \quad 8\% \text{ of } 300 = \mathbf{24}$$

- a By any suitable method determine the following values after the percentage change:

d	40 after an increase of 5% = ?	= 42
e	60 after a decrease of 2% = ?	= 48
f	50 after an increase of 25% = ?	= 62.5
g	24 after a decrease of 75% = ?	= 6
h	35 after an increase of 60% = ?	= 56
i	25 after a decrease of 40% = ?	= 15

4

- [OCR GCSE June 2013 1F Q20a, June 2013 3H Q4a] On weekdays it costs £6.50 per hour to hire a tennis court at Meadway Tennis Club. On Saturdays the cost is 30% more. How much does it cost to hire ? for 2 hours on a Saturday?  
**£16.90**

5

- [Edexcel GCSE June 2017 1F Q19, June 2017 1H Q2] Bill buys and sells laptops. Last month Bill bought 50 laptops. He paid £400 for each laptop. He sold 40 of these laptops at a profit of 30% on each laptop and 10 of these laptops at a profit of 15% on each laptop.

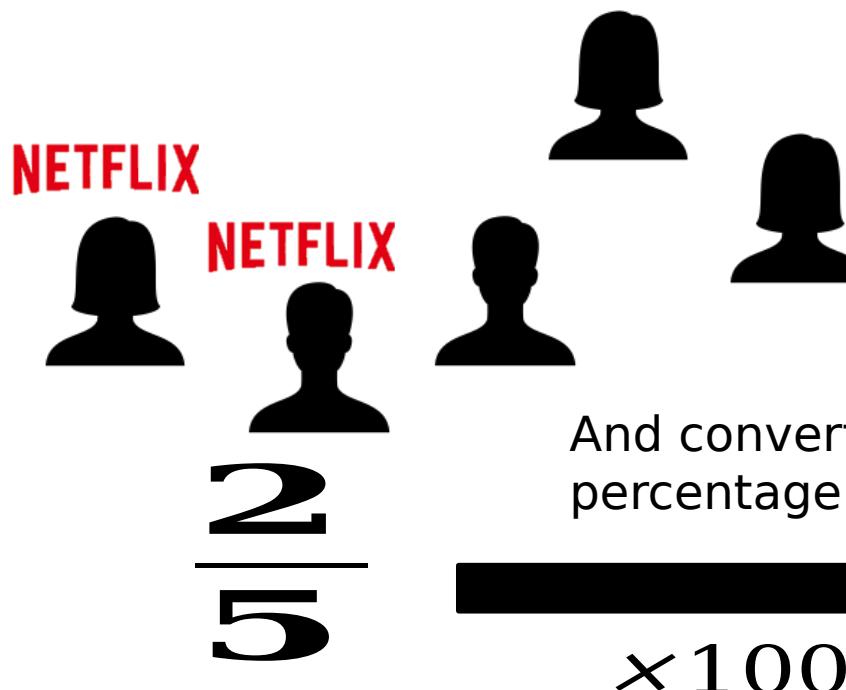

? last month was to sell all 50 laptops for a total of at least £25 000. Did Bill reach this target?  
**£25400 so yes.**

6

- [Edexcel GCSE Nov 2014-1H Q11] Ria is going to buy a caravan. The total cost of the caravan is £7000 plus VAT at 20%. Ria ? a deposit of £3000. She pays the rest of the total cost in 6 equal monthly payments. Work out the

Kamile sells sandwiches. In May, she sold 400 sandwiches. In June, Kamile sold 20% more sandwiches than in May. In July, Kamile sold 15% fewer sandwiches than in June.

Work out the percentage change in her sales from May to July.

2%

# Exercise 2

**CALCULATORS  
PERMITTED**

(on provided  
sheet)

1

[IMC] A shop advertised “Everything half price in our sale”, but also now advertises that there is “An additional 15% off sale prices”. Overall, this is equivalent to what reduction on the

?

57.5%

2

[IMC] Inspector Remorse had a difficult year in 2004. A crime wave in Camford meant that he had 20% more cases to solve than in 2003, but his success rate dropped. In 2003, he solved 80% of his cases, but in 2004 he solved only 60% of them. What was the percentage

?

the number of cases he solved in 2004 compared with 2003?

**Down by 10%**

3

[STMC] In a sale, the price of a computer is reduced by 20%. At this reduced price the shopkeeper still

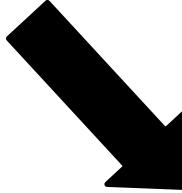

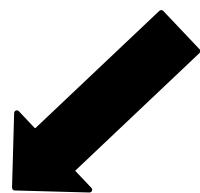

?

fit of 20%. What would have been his percentage profit if the computer had been sold at full price?

# Decimal Multipliers

25% of 12

$$\frac{1}{4} \times 12$$

$$0.25 \times 12$$

Earlier we saw we could convert the percentage into a fraction (and 'of' into )

...but we could also turn it into a decimal.

The 0.25 is known as a **decimal multiplier**, and multiplying by it has the effect of finding 25% of something.

# Examples

Suppose we wanted to find 100% of £14. What would we multiply it by?

?

What if we wanted to find 80% of it?

?

What if we wanted to increase it by

?

Reduce it by 15%?

?

80% as a decimal is 0.8. This *\*feels\** right, because multiplying by a number just less than 1 makes the number just slightly smaller, which we expect.

Everything starts at 100%. So if it increases by 10%, it's now at 110%. This is 1.1 as a decimal. This *\*feels\** right as multiplying by 1.1 slightly

Everything starts at 100%. So if it decreases by 15%, it's now at 85%. This *\*feels\** right as multiplying by 0.85 is a bit less than 1 so slightly decreases the number.

# Quickfire Questions

Effect	Multiplier
No change	?
Find 15% of it.	?

# Exercise 4

(on provided sheet)

[TMC Regional 2013 Q7]

A shopkeeper paid £30 (cost price) for a coat. She wishes to place a price tag on it so that she can offer a 10% discount on the price marked on the tag and still make a profit of 20% on the cost

What price should be on the tag?

**Solution:** £40

[JMO 2001 A6] ‘One third of the population now has access to the internet; this is 50% more than one year ago.’

What fraction of the population had internet one year ago?

**Solution:**

[SMC 2007 Q9] In a sale, a shopkeeper reduced the advertised selling price of a dress by 20%. This resulted in a profit of 4% over the cost price of the dress. What percentage profit would the shopkeeper have made if the dress

# Compound Changes

Sometimes we have to consider multiple percentage changes one after another.

My house is worth £750,000. However, due to an economic crisis, the value depreciates by 10% each year. How much is it worth 3 years later?

The decimal multiplier for a 10% decrease is 0.9.  
We multiply by 0.9 to get the value after the first year.

$$750000 \times 0.9 \times 0.9 \times 0.9$$

$$\therefore 750000 \times 0.9^3$$

$$\therefore 546750$$

We can simply multiply by 0.9 again to apply the decrease again. We do so a third time for the third year.

We can write this calculation more concisely using a power.

! Value after multiple applications of a percentage change:

where  $m$  is the multiplier representing the percentage change and  $n$  is the number of times to apply it.

# Further Examples

I put £1000 into an account with 3% interest per annum. How much is there in the account after 7 years?

**Side Notes:** “Bank interest” is the percentage your money saved goes up by each year – the idea is that banks can use your money to make more money, e.g. through loans to other people, so they reward you for saving with them. “Per annum” means per year.

?

In Bickerbank, you receive 1% interest p.a. in the first year and 5% in each subsequent year. If I save £250, how much do I have after 6 years?

?

# Compound vs Simple Interest

I put £1000 into an account with 3% interest per annum. How much is there in the account after 7 years?

A common student error is this:

**3% of £1000 is £30.**

**This means I earn £30 per year:**

What went wrong?

?

With **compound interest**:

# Quickfire Compound Changes

State the calculation you would require for the following (final value not needed)

Question	Calculation required
1 The value of a car after 4 years if its initial value is £8000 and it falls in value by 20% each year.	?
2 The height of a child after 6 years if he starts at 70cm tall and grows by 5% each year.	?
3 My bank balance at 15 years if I initially save £5600 and get 2.5% interest p.a.	?
4 The number of stamps in my collection after 10 years if I start with 60 stamps, and increase my collection by 30% in the first year and 20% in each subsequent year.	?

# Test Your Understanding So Far

- 1 [Edexcel GCSE June 2004 4I Q24a, June 2004 6H Q12a]

A company bought a van that had a value of £12 000

Each year the value of the van depreciates by 25%.

Work out the value of the van after 3 years.

**Vocab:**  
“depreciate”  
means reduce in  
value.

- 2 [Edexcel GCSE June 2017 2H Q14]

Simple

Simple interest

2.3% each year

Compound

Compound interest

2.15% each year

?

# Variations of compound change questions

So far we've dealt with compound change questions where we're calculating the new value after multiple changes.

$$original \times d^n = new$$

But it could be the original value that is unknown (i.e. a “*reverse percentage*” question):

“I invest some money. After 3 years with 50% interest, I have £3375. What did I originally invest?”

Or the number of years/months could be unknown...

“I put £1000 into a bank account with 10% interest. After how many years will the amount I have reach above £2000?”

Or even the multiplier could be unknown...

“I put £1000 into a bank account. After 3 years, with compound interest, I have £1500. What percentage interest did I get each year?”

# Type 1: Reverse Compound Change

The key for all three types of these questions is to just use the usual formula.

I invest some money. After 3 years with 50% interest, I have £3375. What did I originally invest?

?

Test Your  
Understanding

The population of polar bears decreased 10% each year for 5 years, before dropping to 23620 bears. How many

?

# Type 2: Unknown time

The key for all three types of these questions is to just use the usual formula.

I put £1000 into a bank account with 10% interest. After how many years will the amount I have reach above

?

## Test Your Understanding

[6-6H Q17] Gwen bought a new car. Each year, the value of her car depreciated by 9%. Calculate the number of years after which the value of h

?

**Note:** You're not even given the value of the car! Any value (e.g. £10 000) will do.

# Type 3: Unknown percentage change

The key for all three types of these questions is to just use the usual formula.

“I put £1000 into a bank account. After 4 years, with compound interest, I have £1500. What percentage interest did I get each year?”

?

**Note:** You can't just divide the 50% overall increase by 4 (i.e. the answer is not 12.5% per year). The amount the account value rises by each year is not the same.

## Test Your Understanding

[Question 1, Mock Set 1 Autumn 2016 3H Q14]

The number of fish in a lake decreases by % each year. Given that the number of fish halves in 8 years, work out the value of . Give your answer correct to 1 decimal place.

?

**Hint 1:** You aren't given a starting number of fish. Just start with any simple number.

**Hint 2:** As with the example above, find the decimal multiplier first, and then convert this into the percentage .
